Summary — Computer Engineering graduate with practical experience in IT support, system administration, network troubleshooting, and hardware maintenance. Experienced in diagnosing and resolving hardware, software, and connectivity issues, supporting Windows and Linux environments, and installing and configuring computer networks and CCTV systems. Completed CCNA training with a solid foundation in networking and troubleshooting. Demonstrates strong problem-solving skills, customer support, and the ability to manage technical tasks independently. Currently expanding knowledge in cybersecurity and IT infrastructure.

Skills

System Administration Active Directory, Remote Desktop Services, System Maintenance

Operating Systems Windows, Linux (Ubuntu, Fedora)

Networking TCP/IP, IP Addressing, Network Configuration, DNS, DHCP, Static & Dynamic Routing (RIPv2, EIGRP, OSPF), Troubleshooting

IT Support Hardware/Software Troubleshooting, Software Installation, System Upgrades, Remote Support

Containers & CI/CD Docker, Docker Compose, Container Management, GitHub Actions

Development Python, C/C++, Java, Node.js, Go

Tools Git, Bash, Command Line Tools, AnyDesk, Cisco Packet Tracer

Virtualization VMware ESXi, VirtualBox, Hyper-V

Soft Skills Communication, Problem Solving, Teamwork, Time Management

Experience

BytesExchange **Nov 2025 – Present**
Founder & IT Hardware and Network Technician

- Founded and manage a technical services business specializing in computer, laptop, and graphics card repair and maintenance.
- Diagnose and troubleshoot hardware and software issues, perform repairs, and help customers identify suitable technical solutions.
- Install and configure CCTV systems, IP cameras, NVRs, and remote monitoring solutions for homes and businesses.
- Install and configure computer networks, routers, switches, and network connectivity for customers.
- Manage customer inquiries, service requests, repair work, and day-to-day business operations.

AMAN **Jul 2024 – Nov 2025**
Network & Systems Administrator

- Assisted with configuring and maintaining local area networks, network devices, and connectivity.
- Supported system administration tasks, including server maintenance, user access management, and operating system troubleshooting.
- Installed and configured CCTV cameras and related surveillance equipment.
- Diagnosed hardware, software, and network issues and assisted in implementing technical solutions.
- Supported infrastructure maintenance, system updates, and technical documentation.

PALTEL **Dec 2023 – Apr 2024**
Technical Support Representative

- Provided technical assistance to customers over the phone, resolving hardware and network issues, which directly enhanced customer satisfaction and trust in our support services.
- Logged support tickets and tracked problem resolution using internal CRM systems, helping to maintain clear communication and organization within the team.
- Escalated complex issues to higher-level support when necessary, ensuring timely resolutions and keeping customers informed throughout the process.
- Contributed to knowledge base documentation, which improved support efficiency and empowered team members to resolve issues faster.

HAAT **May 2023 – Dec 2023**
IT Support and System Controller

- Managed and maintained the company's IT systems and network infrastructure, which ensured smooth and secure operations across the organization.

- Provided technical support for company PCs, efficiently troubleshooting hardware and software issues, which helped minimize disruptions to employee productivity.
- Assisted with remote support tools such as AnyDesk, ensuring seamless remote access and rapid issue resolution, thereby improving support response times.
- Installed, configured, and updated software and programs required for daily operations, ensuring all systems were up-to-date and functioning optimally.
- Monitored and optimized system performance, which minimized downtime and maximized efficiency across all departments.
- Oversaw the delivery process, ensuring accurate order handling and timely dispatch, ultimately enhancing customer satisfaction.
- Collaborated with cross-functional teams to resolve IT-related challenges, helping to improve workflow productivity and support company goals.

Education

An-Najah National University **2024**
Bachelor of Science in Computer Engineering
Specialization: Systems Administration and Backend Development

Certifications

- Cisco CCNA 200-301 – Completed training course (Udemy, 42.5 hours). Certificate available upon request.
- Udemy – The Complete Hands-On Cybersecurity Analyst Course (in progress)

Projects

CCNA Network Labs (Cisco Packet Tracer)

- Completed a series of hands-on Cisco labs: built topologies and configured routers and switches from scratch on the IOS command line.
- Configured connected, static, summary and default routes, and dynamic routing with RIPv2 and EIGRP, including propagating a default route to an ISP.
- Configured switch management, interface speed/duplex and CDP; diagnosed and fixed multiple faults that broke DNS connectivity.

Docker Compose Web App **gh docker-compose-webapp**

- Orchestrated a Node.js web service, PostgreSQL and Redis with Docker Compose, using health checks so the app starts only once the database is ready.
- Used named volumes for persistent data and moved credentials into a git-ignored environment file.

Go Service with a CI/CD Pipeline **gh go-ci-pipeline**

- Packaged a Go web service with a multi-stage Docker build into a minimal `scratch` image.
- Built a GitHub Actions pipeline that builds the image, smoke-tests it with curl, and pushes tagged images to GitHub Container Registry on every push.

Inventory and Sales Management System (Platten)

- Developed an inventory and sales management application concept for retail businesses to manage products, stock levels, purchases, sales, and suppliers in one system.
- Designed core features including product and barcode management, purchase and sales invoices, automatic stock updates, returns, and low-stock alerts.
- Planned reporting features for daily and monthly sales, profit tracking, best-selling products, and current inventory valuation.
- Designed role-based access control for owners and employees, with permissions for sales, inventory management, and financial reporting.
- Identified a subscription- or license-based business model to make the system available to multiple retail businesses.
